Experiment 3

```
#include<stdio.h>
#include<sys/types.h>
#include<unistd.h>
void main()
{
  int a,b,c;
  printf("Enter any two numbers");
  scanf("%d%d",&a,&b);
  pid_t pid;
  pid=fork();

        if(pid==0)
        {
          printf("child performing addition\n");
          c=a+b;
          printf("ADD=%d\n",c);
        }

        else
        {
        printf("Parent performing subtraction\n");
        c=a-b;
        printf("SUB=%d\n",c);
        }
}
```

Output:

**Enter any two numbers 10
20
Parent performing subtraction
SUB=-10
child performing addition
ADD=30**
